

# Security Practices

How UnifiedArc protects customer information and operates securely.

## **Read-only, agentless by design**

Assessments use read-only permissions and require no agents - UnifiedArc never modifies your cloud resources or runs remediation automatically.

## **Encryption everywhere**

Data is encrypted in transit (TLS) and at rest using managed encryption.

## **Least-privilege access**

Internal access to data is governed by role-based permissions and least-privilege principles.

## **Secure authentication**

Authentication workflows are designed to protect account access.

## **Auditability**

Security-relevant actions are logged to support traceability.

*UnifiedArc supports compliance readiness and assessment activities. It does not certify or guarantee compliance. | [unifiedarc.com](https://unifiedarc.com)*
